

A brief summary of the ATG Agribusiness projects

Requested by OG Masinga as follows :

2. A brief summary of the activities that has taken place with regards to December and farming projects which will include the farms and the water spings

The Coffee project

The coffee project will be carried in 3 different places, namely:

1. Tikhuba
2. Gamula and
3. Mpolonjeni Siteki (HQM Farm)

These 3 places were all inspected by Mr. Patric DuPont (the Coffee expert). One time we took an exploratory trip with Patrick and the Inkhosatana from Tikhuba and visited all 3 sites. Mr DuPont approved them all in the following order of preference.

- First = Tikhuba
- Second = Mpolonjeni Siteki
- Third = Gamula

We intend to start the project at Tikhuba. Thus, Tikhuba became our focal point to start the Coffee project.

Tikhuba Area

Though we initially went to Tikhuba with the intention to pursue coffee plantations, a number of farms/sites will be made available to ATG Holdings for various businesses at Tikhuba, not only for the Coffee projects. The current lead authority at Tikhuba, Inkhsatana Setsabile Magongo offered us a number of potential business sites to venture into the following business opportunities in the area, namely:

- Coffee Farming
- Spring Water Bottling
- Natural Gas and petroleum (site not yet confirmed)
- Energy Generation by Wind Turbines
- Hospitality and Recreational business

Coffee farm

We have visited 4 possible sites for the coffee at Tikhuba, 3 of which have been inspected and approved by Mr DuPont as best suitable for the Coffee plantation. His comment was that the whole area is outstandingly ideal for the Coffee plantation. There are 5 other sites we are to visit soon with Inkhosatane. 2 of those sites will be intended for farming and the other 3 are springs intended for spring water bottling.

NB: There is an urgent need for a high ride 4-wheel drive vehicle to access these sites and for continued working even in the sites we have already visited. We accessed the last one with much difficulty, having to walk for over 2 hours in total.

Recommendations by Mr DuPont

The 3 coffee sites we have seen are of different sizes, namely:

1. 4.9 Hectares (1190M perimeter)
2. 4.2 Hectares (974M perimeter)
3. 5.6Hectares (1192M perimeter)

We shall start with the 4.9 H farm as per recommendation.

Thus we need to

- Fence the area (1190M perimeter) and provide one big gate and another smaller foot gate.
 - o We need 12 units of the 100m long by 15cm squares, 1.5M high.
 - o Fencing u-nail
 - o 600 x 2.4M wood Fencing poles
 - o 4 x steel fencing poles
 - o 20 x stay-support poles
- Do land preparation/cultivation
 - o 4hrs of cultivation
 - o Bush clearing
- Acquire and plant shade plants (banana and Macadamia trees)
 - o 2 months maunual labourers
- Working tools
 - o 5 x picks
 - o 5 x spades/shovels
 - o 5 x Garden forks
 - o 5 x Bush knives
 - o 5 x garden hoes
 - o 5 x slashers
 - o 60cm space drip lines
 - o 40cm space drip lines
 - o 2 x 10,000L water tanks
- Acquire and plant coffee seedlings
 - o 2 months maunual labourers
- Construct a Tank Stand
- Acquire and install a diesel engine water pump
- Acquire a high ride 4-wheel drive vehicle

Spring water bottling

As ATG Holdings we are set to start with the spring water bottling this January 2026. By 15th January spring water products must already be in the markets.

Thus we must:

- Urgently locate the best spring site for the bottling
- Acquire a shipping container and have it set up and prepared for installing plant equipment
- Acquire, install and set up that water bottling equipment inside the shipping container.
- Source the required working material and appropriate licensing
- Establish contacts with authentic testing laboratories.

Specific details (quantities and exact quotes will be given later

Kind regards

GMT
