

SiyaBusa ERP

AI AUTOMATION FEATURES

Marketing & Sales

Masaphokati Technologies (Pty) Ltd

Document Version: 1.0

Effective Date: January 2026

Department: Marketing

Classification: Public

WE RULE. WE GOVERN. WE EMPOWER.

AetherOS ERP - AI-Powered Automation Features

AI CAPABILITIES

Overview of the advanced AI and automation features integrated into SiyaBusa ERP.

Transform Your Finance Team with Intelligent Automation

AI Capabilities Overview

AetherOS leverages cutting-edge AI and machine learning to automate tedious manual tasks, dramatically reducing processing time and virtually eliminating human error.

Bank Reconciliation - AI-Powered Automation

How It Works:

Step 1: Automatic Transaction Import

- **Daily auto-fetch** from all major SA banks via API
- **Email parsing** - Forward bank statements to system@aetheros.ai
- **Manual upload** - Drag & drop CSV/PDF/MT940 files
- **Real-time sync** with supported banks (FNB, Standard Bank, Nedbank, ABSA, Capitec)

Step 2: AI-Powered Matching

- **Smart matching** - AI learns from your past reconciliations
- **Pattern recognition** - Identifies recurring payments automatically
- **Amount matching** - Matches exact and partial amounts
- **Reference matching** - Reads invoice numbers, supplier names, customer codes
- **Date tolerance** - Matches transactions within configurable date ranges

Step 3: Autonomous Reconciliation

- **Auto-match 85-95%** of transactions with zero human input
- **Auto-post** matched transactions to GL (if enabled)
- **Flag exceptions** - AI identifies unusual patterns requiring review
- **Suggest matches** - For ambiguous cases, AI proposes top 3 matches with confidence scores

Step 4: Machine Learning

- AI learns from your approvals/rejections
- Matching accuracy improves over time
- Adapts to your business patterns
- Detects anomalies (duplicate payments, fraud indicators)

Real-World Performance:

Client Type	Manual Time (Before)	AI Time (After)	Savings
Manufacturing (150 txns/day)	4 hours/day	20 mins/day	92% faster
Retail (500 txns/day)	12 hours/day	1 hour/day	92% faster
Service Firm (80 txns/day)	2 hours/day	10 mins/day	92% faster

Average: 90-95% of transactions reconciled automatically with zero human intervention.

Invoice Processing - AI Document Understanding

Intelligent Document Capture

How It Works:

1. Document Ingestion (Multiple Channels)

- **Email:** Forward invoices to invoices@aetheros.ai
- **Mobile app:** Snap photo of paper invoice
- **Drag & drop:** Upload PDFs/images to portal
- **Supplier portal:** Vendors upload directly
- **API integration:** From e-procurement systems

2. AI Extraction (OCR + NLP)

- **Reads any format** - PDF, image, scanned document, even handwritten
- **Extracts key fields:**
 - Supplier name & VAT number
 - Invoice number & date
 - Line items (description, quantity, price, VAT)
 - Payment terms
 - Bank details

- Total amounts
- **Validates VAT numbers** against SARS database
- **Detects duplicates** - Flags if invoice already captured

3. Smart Matching

- **3-way matching:**
- Purchase Order ↔ Goods Receipt ↔ Invoice
- Automatic matching based on PO numbers, amounts, dates
- Highlights discrepancies (price variance, quantity variance)
- **Supplier matching:**
- Links to existing suppliers in your database
- Suggests new supplier creation if not found

4. Intelligent Approval Routing

- **Auto-routes** based on:
- Amount thresholds
- Department/cost center
- Supplier category
- Budget availability
- **Escalation rules:**
- Auto-escalates if approver doesn't respond within X days
- Notifies manager if urgent

5. Autonomous Posting

- **Auto-posts** if all conditions met:
- 3-way match successful
- Within approval limits
- Budget available
- Supplier verified
- **Creates GL entries** automatically
- **Updates inventory** (if goods received)
- **Schedules payment** based on terms

Real Results:

Before AI:

- Manual data entry: 5-8 minutes per invoice
- Error rate: 3-5%
- Processing backlog: 2-3 days

After AI:

- AI processing: 30 seconds per invoice
- Error rate: <0.1%
- Processing time: Real-time

Client Impact:

"We process 500 invoices per month. AI automation saved us 40 hours of manual work. That's R32,000/month in labor costs, plus virtually eliminated errors."
— **AP Manager, Retail Chain**

Expense Claims - AI Receipt Scanning

How It Works:

1. Employee Submits Claim

- Employee snaps photo of receipt with mobile phone
- AI instantly extracts:
- Merchant name
- Date & time
- Amount & VAT
- Payment method
- Line items

2. AI Validation

- Checks against company policy:
- Expense category allowed?
- Amount within limits?
- Receipt date within claim period?
- VAT number valid?
- Flags violations automatically

3. Smart Categorization

- AI learns your expense categories
- Auto-categorizes based on merchant:
- Shell/Engen → Fuel
- Pick n Pay → Groceries (rejected if not allowed)
- Woolworths → Client entertainment
- Uber → Travel

4. Auto-Approval (Low-Risk Claims)

- Claims under R500 + matching policy = auto-approved
- Recurring expenses (monthly subscriptions) = auto-approved
- Posted to GL automatically

Result: 70-80% of expense claims processed with zero manual intervention.

Credit Control - AI-Powered Collections

Intelligent Dunning

How It Works:

1. AI Monitors Overdue Invoices

- Scans aged debtors daily
- Identifies payment patterns per customer
- Predicts likelihood of payment

2. Automated Communication

- **Day 1 overdue:** Friendly reminder (auto-sent)
- **Day 7:** Second notice with account statement
- **Day 14:** Urgent notice + escalation to account manager
- **Day 30:** Final notice + automatic credit hold
- **Day 45:** Handover to legal/collections

3. AI Personalization

- Learns which customers respond to which message types
- Optimizes send times (when customer is most likely to pay)
- Adjusts tone based on customer relationship value

4. Payment Promise Tracking

- If customer promises payment on specific date, AI monitors
- Alerts you if promise not kept
- Auto-follows up next day

5. Smart Prioritization

- AI scores customers by:
- Amount overdue
- Days overdue
- Historical payment behavior
- Customer value (lifetime revenue)
- Probability of payment
- Suggests which customers to call first

Results:

- **DSO reduction:** 15-25 days on average
- **Collection rate:** +18%
- **Bad debt:** -40%

Client Impact:

"AI collections freed up R8.5M in working capital in the first 6 months. The system is relentless—it never forgets to follow up."
— **CFO, Distribution Company**

Cash Flow Forecasting - AI Predictions

Intelligent Forecasting

How It Works:

1. Data Collection

- Historical cash flow patterns (12+ months)
- Current AR aging (when payments expected)
- Current AP aging (when payments due)
- Sales pipeline (expected orders)

- Seasonal patterns
- External factors (interest rates, holidays, industry trends)

2. AI Prediction Engine

- **Machine learning model** trained on your data
- **Predicts:**
 - Daily/weekly/monthly cash position
 - Shortfall dates (when you'll need funding)
 - Surplus dates (when to invest)
 - Payment timing (when customers will actually pay)
 - Collection probability per invoice

3. Scenario Planning

- "What if" analysis:
 - What if sales drop 20%?
 - What if customer X doesn't pay?
 - What if we delay supplier payment?
 - What if we take on new loan?

4. Proactive Alerts

- **7 days before cash crunch:** Alert CFO to arrange funding
- **Surplus detected:** Suggest investment opportunities
- **Major customer payment delayed:** Alert account manager

Accuracy: 90-95% accuracy within 30-day forecast window.

Fraud Detection - AI Anomaly Detection

Always Watching, Always Learning

How It Works:

1. Transaction Monitoring

- AI learns normal patterns for:
 - Supplier payment amounts
 - Customer payment frequencies
 - Expense claim patterns
 - Inventory movements

- User behavior

2. Anomaly Detection

- **Flags unusual activity:**
 - Duplicate invoice numbers
 - Changed bank details
 - Round-number invoices (often fraud)
 - Weekend/after-hours transactions
 - Unusual approver bypassing
 - Rapid-fire transactions
 - Split transactions to avoid approval limits

3. Fraud Indicators

- **High-risk patterns:**
- New supplier + urgent payment + changed bank details = **RED FLAG**
- Invoice just below approval limit = **YELLOW FLAG**
- Same invoice to multiple entities = **RED FLAG**
- Supplier VAT number invalid = **RED FLAG**

4. Automatic Response

- **High-risk transactions:** Auto-hold pending manual review
- **Suspicious patterns:** Alert CFO + freeze user access
- **Duplicate payments:** Block automatically

Client Saves:

- **R850K fraud attempt blocked** (changed bank details)
- **R250K duplicate payment prevented**
- **R180K ghost employee detected**

GL Coding - AI-Powered Categorization

Smart Account Assignment

How It Works:

1. Learning Phase

- AI observes your GL coding patterns for 30 days

- Learns which accounts you use for which vendors/categories
- Builds prediction model

2. Auto-Coding

- Suggests GL accounts for every transaction:
- Engen (supplier) → Fuel expense (GL: 5200)
- Vodacom → Telephone (GL: 5150)
- SARS → Tax payable (GL: 2100)
- Includes dimensions (department, project, cost center)
- Confidence score: 98% confident, 75% confident, etc.

3. Continuous Learning

- When you approve a suggestion → AI reinforces
- When you reject → AI learns and adjusts
- Accuracy improves over time

4. New Transaction Handling

- For truly new transactions (no pattern), AI:
- Suggests similar accounts based on description
- Flags for manual coding
- Learns from your choice

Result: 85-90% of transactions auto-coded correctly.

Supplier Matching - AI Entity Resolution

Intelligent Vendor Deduplication

The Problem:

- Same supplier entered multiple times:
 - "ABC (Pty) Ltd"
 - "ABC Proprietary Limited"
 - "ABC"
 - "A B C (PTY) LTD"

AI Solution:

- Detects duplicate suppliers even with different names

- Uses fuzzy matching (handles typos, abbreviations)
- Checks:
 - VAT numbers
 - Bank account numbers
 - Physical addresses
 - Contact emails
- Suggests merge with confidence score
- Prevents duplicate creation

Result: Clean, deduplicated supplier master data.

SARS Deadline Management - AI Calendar

Never Miss a Deadline

How It Works:

1. Intelligent Calendar

- AI knows all SARS deadlines:
 - EMP201 (7th of following month)
 - VAT201 (25th of following month)
 - IRP5 (May 31st)
 - EMP501 (May 31st)
 - IT14 (Various dates based on year-end)
- Tracks deadlines for 250+ clients (accounting practices)

2. Smart Alerts

- **30 days before:** Advance notice
- **14 days before:** Reminder + checklist
- **7 days before:** Urgent alert
- **3 days before:** Critical alert + escalate to manager
- **Day of:** Emergency alert (if not submitted)

3. Workflow Automation

- Auto-generates submission files
- Pre-populates forms from system data
- Validates data before submission

- Auto-submits to SARS eFiling (if enabled)
- Stores proof of submission

4. Compliance Dashboard

- Real-time view of all upcoming deadlines
- Traffic light system (green/yellow/red)
- Drill-down by client/entity
- Historical compliance tracking

Result: 100% deadline adherence. Zero penalties.

AI Features Summary

Feature	Manual Time	AI Time	Automation %
Bank Reconciliation	4 hrs/day	20 mins/day	92%
Invoice Processing	5 mins/invoice	30 secs/invoice	90%
Expense Claims	3 mins/claim	Auto	80%
Credit Collections	2 hrs/day	20 mins/day	83%
GL Coding	2 mins/txn	Auto	88%
Fraud Detection	Manual audits	Real-time	100%
SARS Compliance	Manual tracking	Auto alerts	100%

Overall: AI handles 85-90% of routine finance tasks autonomously.

How AI Learns Your Business

The Learning Process:

Month 1: Observation

- AI watches your patterns
- Learns your GL structure
- Understands your suppliers/customers
- Observes approval workflows
- **Accuracy: 60-70%**

Month 2-3: Assisted Automation

- AI suggests, you approve/reject
- Learning accelerates from feedback
- Confidence scores improve
- **Accuracy: 80-85%**

Month 4+: Autonomous Operation

- AI handles most transactions automatically
 - Only flags exceptions
 - Continuous improvement
 - **Accuracy: 90-95%**
-

AI Safety & Control

You're Always in Control:

Override any AI decision - Manual approval always available

Audit trails - Every AI decision logged

Confidence thresholds - Set minimum confidence for auto-posting

Review queues - Check AI decisions before they go live

Kill switch - Disable AI automation anytime

Explainable AI - System shows why it made each decision

Getting Started with AI

Implementation Path:

Week 1: Setup

- Configure bank feeds
- Set up email parsing
- Define approval rules
- Set confidence thresholds

Week 2-4: Training

- AI observes your patterns
- You review and approve suggestions
- System learns from feedback

Week 5+: Autonomous Operation

- AI handles routine tasks
- You focus on exceptions
- Continuous improvement

No AI expertise required! - System is fully managed, self-learning.

See AI in Action

Book a live AI demo:

- Watch bank reconciliation happen in real-time
- See invoice AI extract data from a PDF
- Experience fraud detection live
- Try the mobile expense scanner
