

SiyaBusa ERP

CONCEPT DOCUMENT

Investor & Partner Documentation

Masaphokati Technologies (Pty) Ltd

Document Version: 1.0

Effective Date: January 2026

Department: Executive

Classification: Confidential

WE RULE. WE GOVERN. WE EMPOWER.

 PRODUCT VISION & ARCHITECTURE

The foundational document describing the SiyaBusa ERP vision, architecture, and feature set in detail.

SiyaBusa ERP

Seamlessly Integrated Yielding Accountability for Businesses with Unified Systems & Automation

"We Rule. We Govern. We Empower."

Concept Document
Version 1.0 | December 2025

Prepared for Stakeholders, Investors & Strategic Partners

Document Overview

Section	Description
1. Executive Summary	Vision, mission, and value proposition
2. The Problem We Solve	Market challenges and opportunity
3. Our Solution	What we have built
4. Module Portfolio	Complete system capabilities
5. Competitive Positioning	Market comparison
6. Key Differentiators	What makes us unique
7. Go-To-Market Strategy	Launch and growth plan
8. Investment Opportunity	Why this matters

1. Executive Summary

The Name: SiyaBusa

SiyaBusa (pronounced *see-yah-BOO-sah*) comes from the Zulu language, meaning "**We Rule**" or "**We Govern**."

This name reflects our core mission: **empowering South African businesses to take command of their operations** — with the same calibre of tools that global enterprises use, but designed specifically for our market.

The Acronym

Seamlessly Integrated Yielding Accountability for Businesses with Unified Systems & Automation

Every letter represents what we deliver:

- **Seamless Integration** — Operations and accounting as one unified system
 - **Accountability** — Complete audit trails, compliance, and governance
 - **Unified Systems** — One platform replacing multiple disconnected tools
 - **Automation** — AI-powered assistance and automated workflows
-

Our Vision

To become the ERP platform of choice for African businesses — delivering enterprise-grade capabilities at accessible prices, with native compliance and world-class support.

Our Mission

To empower mid-market businesses across Africa with intelligent, integrated business management software that eliminates complexity, ensures compliance, and drives growth.

2. The Problem We Solve

The Two-Tier Challenge

South African businesses face a fundamental problem in the ERP market. There are two distinct tiers, and neither adequately serves the mid-market:

Tier 1: Global Enterprise ERP

Players: SAP Business One, Oracle NetSuite, Microsoft Dynamics 365, Sage X3

Challenge	Impact
Prohibitive Cost	R50,000 – R200,000+ per month
Extended Implementation	6–18 months before go-live
Localization Complexity	SA compliance requires expensive customization (R500K–R2M+)
Partner Dependency	Support through resellers, not direct vendor relationship
Overkill for Mid-Market	Designed for enterprises with 1,000+ employees

Result: Out of reach for 90%+ of South African businesses that need full ERP capabilities.

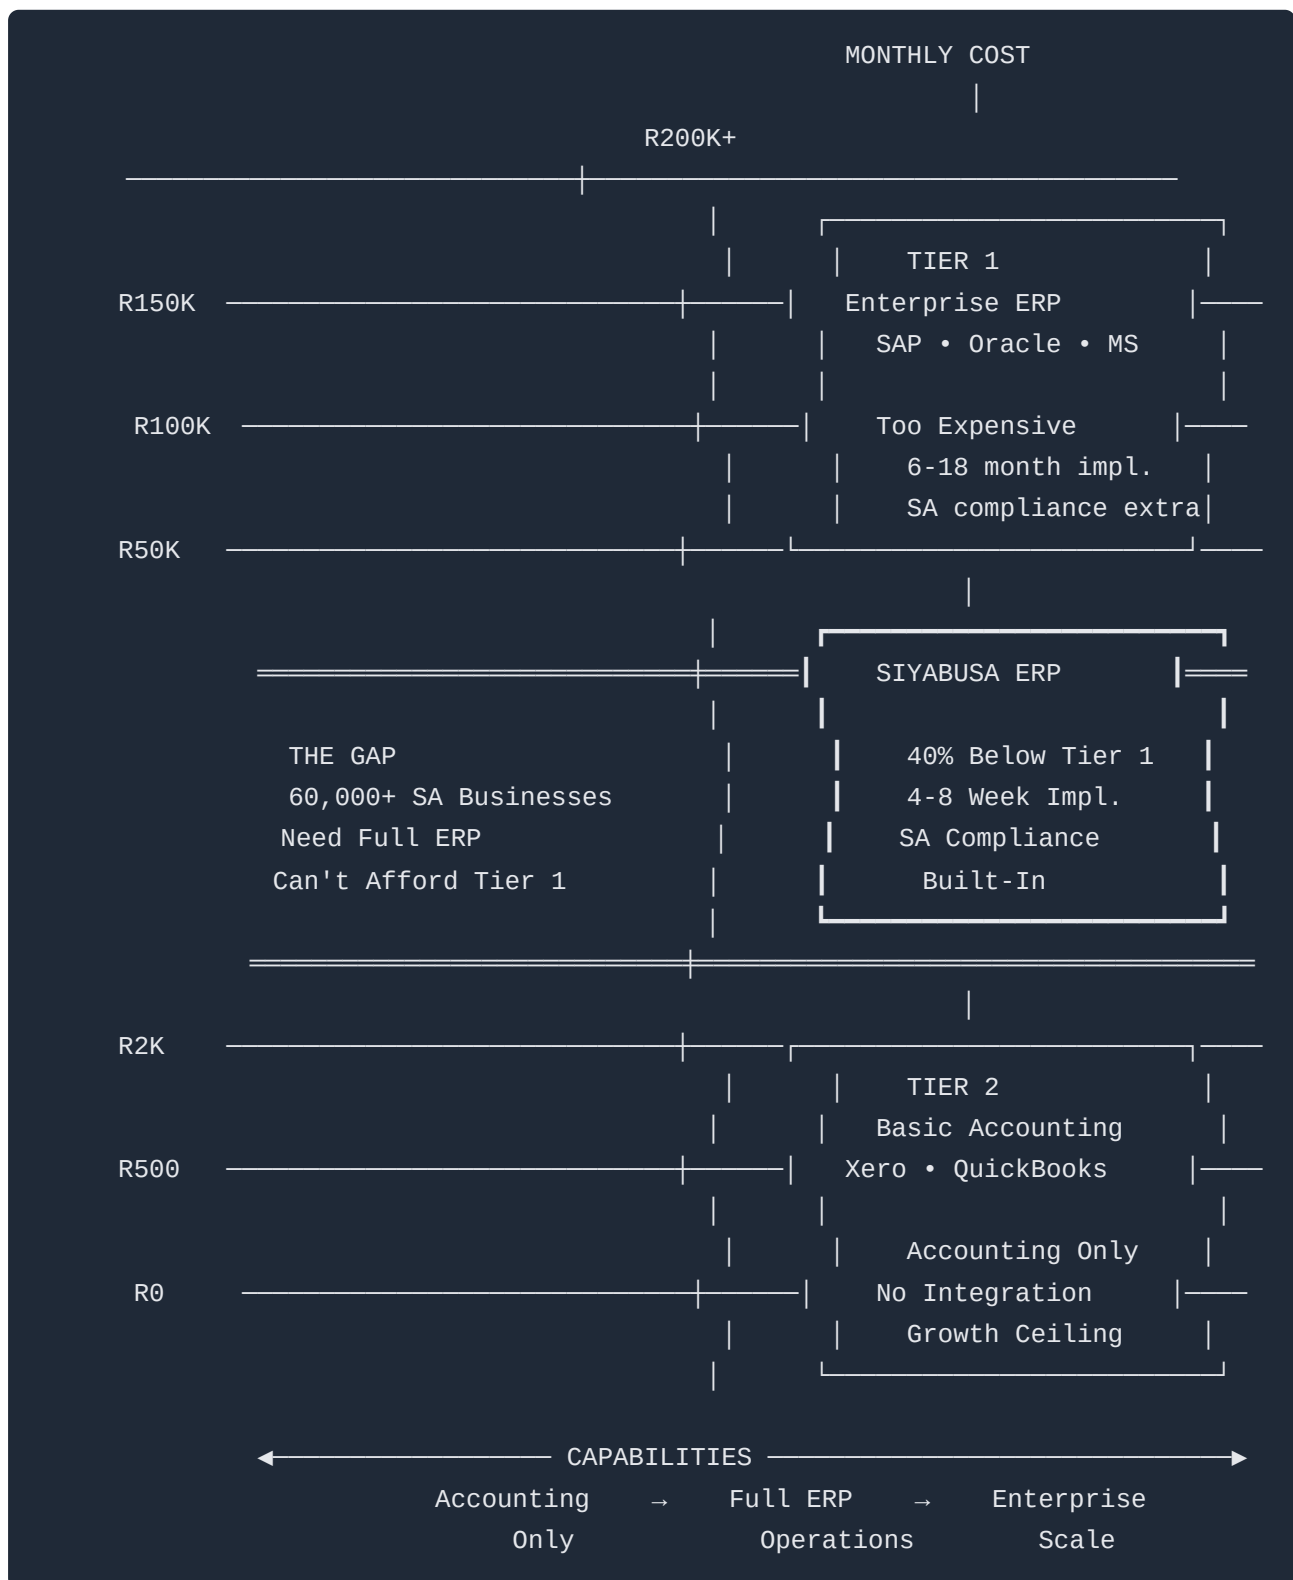

Tier 2: Basic Accounting Software

Players: Xero, QuickBooks, Sage Accounting

Challenge	Impact
Limited Scope	Accounting only — no manufacturing, warehouse, HR, or operations
No Integration	Requires multiple add-ons that don't talk to each other
Growth Ceiling	Businesses outgrow them but have nowhere affordable to go
Manual Compliance	SARS submissions, PAYE calculations done manually or via separate tools
Data Silos	Sales in one system, inventory in spreadsheets, HR in another tool
Operational Blind Spots	No visibility into production, warehouse, or field operations

Result: Businesses cobble together multiple disconnected systems, creating inefficiency, errors, and compliance risk. When they're ready to grow, they face a painful choice: stay limited or pay enterprise prices.

The Gap

SiyaBusa ERP exists to fill this gap:

- For businesses **outgrowing** Xero/QuickBooks who need full ERP but can't afford SAP
- For businesses **priced out** of enterprise ERP who need a modern alternative

- For businesses **frustrated** with cobbled-together systems who want one integrated platform

3. Our Solution

What We Have Built

SiyaBusa ERP is a **comprehensive, cloud-native Enterprise Resource Planning system** built from the ground up for South African businesses.

Development Achievement Summary

Metric	Achievement
Total Modules	25+ complete modules
API Endpoints	400+ REST API endpoints
Database Tables	228+ tables with proper relationships
Production Code	50,000+ lines of TypeScript
Industry Verticals	6 specialized verticals
AI Assistants	9 intelligent agents
Infrastructure	AWS (EC2, RDS, S3) — Production Ready

Technology Foundation

Layer	Technology	Why It Matters
Frontend	React 18, TypeScript, Vite	Modern, responsive, fast
Backend	Node.js, Express.js, TypeScript	Scalable, maintainable
Database	PostgreSQL (AWS RDS)	Enterprise-grade, reliable
Cache	Redis	High-performance data access
Cloud	AWS (EC2, RDS, S3)	Global infrastructure, SA data residency
Architecture	Multi-tenant	One platform, isolated client data

4. Module Portfolio

Complete Business Coverage

SiyaBusa ERP provides **end-to-end business management** across all functional areas. Clients pay only for the modules they need.

Platform Architecture

Core Business Operations

Module	Capabilities
Sales & CRM	Lead management, opportunity tracking, quotations, invoicing, customer portal, payment tracking, sales analytics
Purchase Management	Supplier management, purchase requisitions, PO automation, goods receipt, 3-way matching, supplier performance
Inventory Management	Real-time stock levels, multi-warehouse, bin/location tracking, stock movements, valuation methods (FIFO, weighted average)
HR & Payroll	Employee lifecycle, recruitment, PAYE/UIF/SDL automation, BCEA leave management, performance reviews, training tracking
Practice Management	Professional services billing, timesheet tracking, engagement management, WIP tracking, utilization reporting
Asset Management	Fixed asset register, depreciation (IAS 16 & SA tax methods), maintenance scheduling, disposal tracking

Financial Management

Module	Capabilities
Financial Accounting	General ledger, chart of accounts, journal entries, IFRS-compliant financial statements, multi-currency
Cash Management	Bank reconciliation, cash flow forecasting, payment processing, liquidity monitoring
Multi-Entity	Consolidated reporting, intercompany transactions, multi-company management, elimination entries
Treasury	Investment management, FX positions, liquidity management, bank relationship management

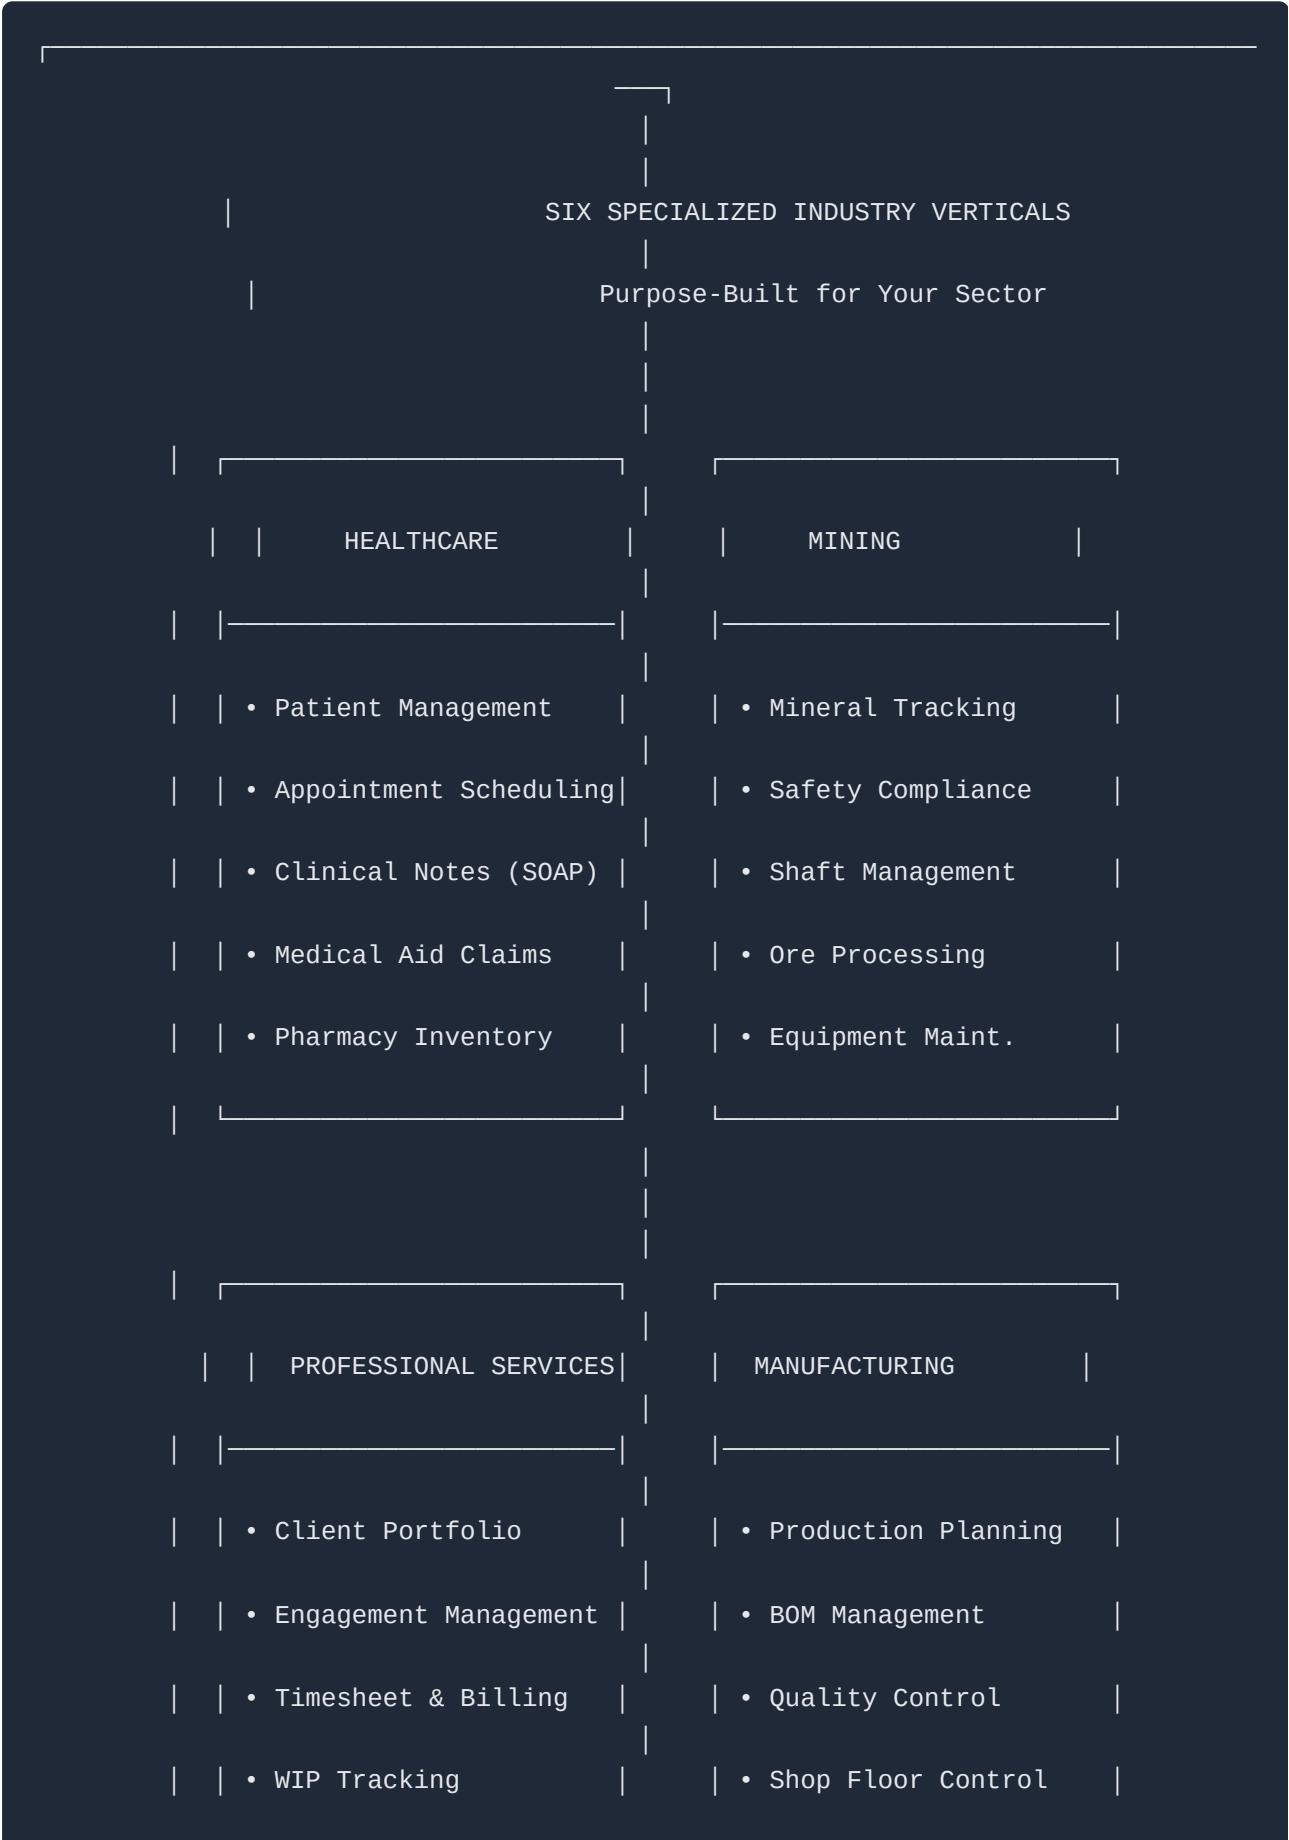

Operations

Module	Capabilities
Manufacturing	Production orders, bill of materials (BOM), work centers, capacity planning, MRP, shop floor control
Warehouse Management	Bin management, picking/packing, cycle counts, barcode scanning, wave management, cross-docking
Logistics & Fleet	Vehicle tracking, fuel management, route optimization, delivery scheduling, driver management
Project Management	Project planning, task management, resource allocation, progress tracking, project costing

Compliance & Governance

Module	Capabilities	Status
SARS Sentinel	Tax compliance monitoring, eFiling preparation, deadline tracking, correspondence management, submission history	Complete (SARS API integration pending)
Audit Ready	Complete audit trails, pre-built audit checklists, engagement management, finding tracking, evidence repository	Complete
Regulatory Compliance	POPIA, FICA, King IV frameworks, policy management, risk assessment, B-BBEE scorecard tracking, control monitoring	Complete

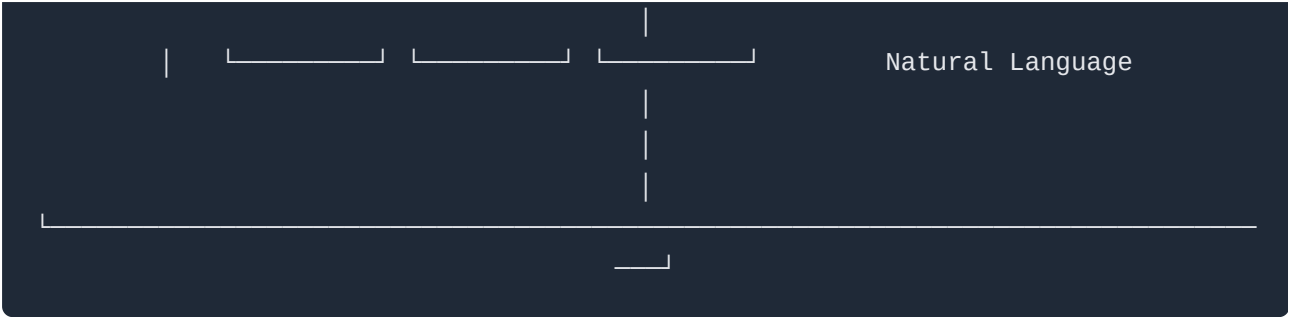

Industry Vertical Modules

• Partner Compensation	• OEE Tracking
PROPERTY MANAGEMENT	CONSTRUCTION
• Lease Management	• Project Costing
• Tenant Billing	• Progress Billing
• Maintenance Requests	• Contractor Management
• Property Portfolio	• Equipment Tracking
• Occupancy Tracking	• Site Management

Industry	Module	Specialized Capabilities
Healthcare	Healthcare Operations	Patient management, appointment scheduling, clinical notes (SOAP), medical aid claims (ICD-10 coding), pharmacy inventory
Mining	Mining Operations	Mineral tracking, safety compliance, shaft management, ore processing, equipment maintenance, shift management
Professional Services	Practice Management	Client portfolio, engagement management, timesheet & billing, WIP tracking, partner compensation
Manufacturing	Manufacturing Hub	Production planning, BOM management, quality control, shop floor control, OEE tracking
Property	Property Management	Lease management, tenant billing, maintenance requests, property portfolio, occupancy tracking
Construction	Construction Management	Project costing, progress billing, contractor management, equipment tracking, site management

Module	Capabilities
AI Assistant (SiyaBusa AI)	Natural language queries, contextual help, actionable recommendations, 9 specialized AI agents
Communications Hub	Video meetings (Daily.co), internal messaging, notifications, document sharing
Reports & Analytics	Custom report builder, KPI dashboards, scheduled reports, data export
Admin & Settings	User management, role-based access control, tenant configuration, system settings

5. Competitive Positioning

Our Market Position

We compete with **enterprise ERP vendors** in the mid-market segment. Our target customers are businesses that:

- Have **50–500 employees**
- Generate **R10M–R500M annual revenue**
- Need **full ERP** (not just accounting)
- Require **SA compliance** without expensive customization
- Want **modern technology** without legacy complexity

Competitive Landscape

Vendor	Position	Typical Cost	Implementation	SA Compliance
SAP Business One	Mid-market ERP	R50K–R150K/month	6–12 months	Requires customization
Oracle NetSuite	Cloud ERP	R80K–R200K/month	4–6 months	Requires customization
Microsoft Dynamics	Enterprise ERP	R60K–R180K/month	6–12 months	Requires customization
Sage X3	Mid-market ERP	R35K–R100K/month	6–9 months	Partial (via partners)
Siyabusa ERP	Mid-market ERP	40% below competitors	4–8 weeks	Native, built-in

Pricing Philosophy

We follow the **per-user pricing model** established by global ERP leaders — but at **40% lower rates**.

Why Per-User Pricing?

Reason	Benefit
Industry Standard	Familiar model that businesses understand
Predictable Scaling	Costs grow proportionally with organization
Pay for What You Use	No overcharging for unused capacity
Proven Model	Validated by SAP, Oracle, Microsoft

Our Advantage

- **Same pricing model** as global leaders
- **40% more affordable** rates
- **Native SA compliance included** (not an expensive add-on)
- **Faster implementation** (weeks, not months)

Feature Comparison

Capability	SiyaBusa	SAP B1	NetSuite	Dynamics 365
Core Financials				
HR & Payroll (SA-compliant)	Native	Third-party	Third-party	Third-party
Manufacturing				
Warehouse Management				
CRM/Sales				
SARS eFiling Preparation	Native	Custom	Custom	Custom
PAYE/UIF/SDL Automation	Built-in	Manual config	Manual config	Manual config
BCEA Leave Compliance	Automated	Manual	Manual	Manual
B-BBEE Tracking	Built-in	None	None	None
AI Assistant (Natural Language)	Built-in	None	Limited	Limited
Audit Trail/Compliance Hub	Comprehensive	Basic	Basic	Basic
Industry Verticals	6 included	Expensive add-ons	Separate SKUs	Separate SKUs
Implementation Time	4–8 weeks	6–12 months	4–6 months	6–12 months
Local SA Support	Direct	Via partners	Via partners	Via partners

6. Key Differentiators

What Makes SiyaBusa ERP Unique

We are not simply a "cheaper alternative." We offer **distinct capabilities** that global ERPs cannot easily replicate.

Differentiator 1: Native South African Compliance

The Problem:

Global ERPs treat South Africa as an afterthought. Localization projects cost R500K–R2M+ and take 6+ months.

Our Solution:

SiyaBusa ERP is **built from the ground up** for South African requirements.

Compliance Area	What We Provide
Tax Compliance	PAYE calculations using current SARS tax tables, UIF (2% split), SDL (1%), VAT handling
Labour Law	BCEA leave entitlements automated, Employment Equity reporting, Skills Development Act
Regulatory	POPIA data protection, King IV governance, FICA compliance
Filing Preparation	SARS-ready submission files (EMP201, EMP501, VAT201, IRP5)

Differentiator 2: SARS Sentinel Module

The Problem:

Businesses miss SARS deadlines, face penalties, and struggle to track tax correspondence.

Our Solution:

A dedicated **tax compliance command center**.

Feature	Description
Deadline Dashboard	All SARS submission deadlines in one view
Multi-Level Alerts	Reminders at 30, 14, 7, 3, and 1 day(s) before deadlines
Correspondence Tracking	Log and track all SARS communications
Compliance Scoring	Visibility into compliance status across tax types
Submission History	Complete audit trail of all submissions

Note: Direct SARS eFiling API integration is pending approval from SARS. Current functionality prepares submission-ready files.

Differentiator 3: Audit Ready Module

The Problem:

Audit preparation is stressful, time-consuming, and often reveals gaps in documentation.

Our Solution:

Continuous audit readiness — not just at year-end.

Feature	Description
Complete Audit Trail	Every transaction logged with user, timestamp, before/after states
Pre-Built Checklists	Ready-to-use checklists for financial audits, compliance audits, internal audits
Evidence Repository	Centralized, secure storage for audit documentation
Finding Management	Track audit findings from identification to resolution
Engagement Management	Manage external auditor relationships and timelines

Differentiator 4: Regulatory Compliance Hub

The Problem:

Managing compliance across multiple regulations (POPIA, FICA, King IV, industry-specific) is fragmented and risky.

Our Solution:

Unified compliance management across all applicable frameworks.

Feature	Description
Framework Library	POPIA, FICA, King IV, Companies Act, industry regulations
Policy Management	Create, version, distribute, and track acknowledgment of policies
Risk Assessment	Identify, assess, and monitor compliance risks
Control Monitoring	Evidence collection for compliance controls
B-BBEE Tracking	Scorecard management and improvement tracking

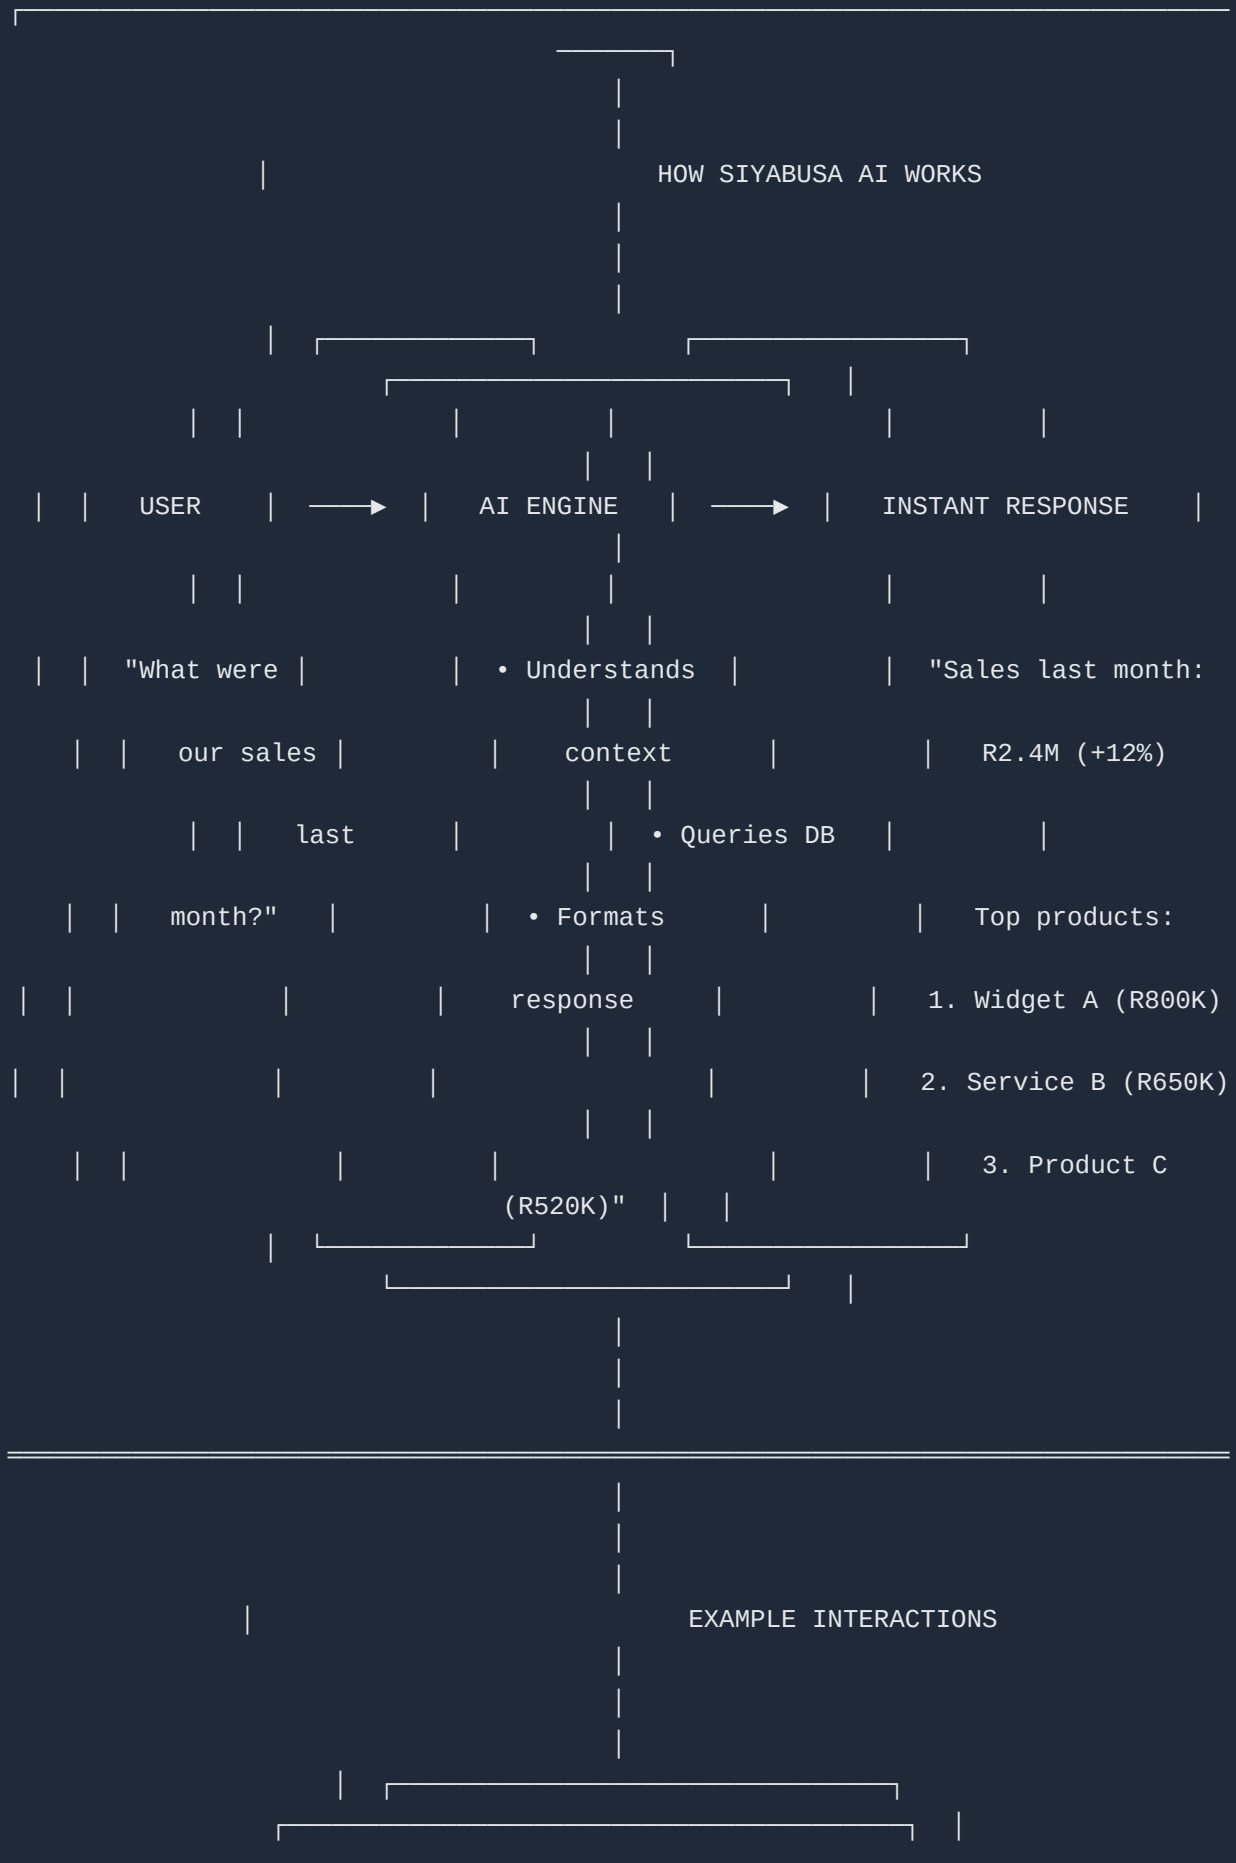

Differentiator 5: AI-Powered Natural Language Assistant

The Problem:

ERP systems are complex. Users need extensive training, documentation, and often IT support for basic tasks. This slows adoption, increases support costs, and frustrates users.

Our Solution:

SiyaBusa AI — an intelligent assistant that understands natural language and knows your business context.

How It Works

Users can interact with SiyaBusa ERP using **plain English** (or other languages). The AI understands context, retrieves relevant data, and provides actionable responses.

What You Ask	What You Get
<i>"What were our sales last month?"</i>	Instant answer with comparative data
<i>"Show me overdue invoices over R50,000"</i>	Filtered list with customer details and aging
<i>"I need to create a purchase order for ABC Supplies"</i>	Guided navigation to the right screen with supplier pre-selected
<i>"How do I reconcile my bank account?"</i>	Step-by-step guidance with screenshots
<i>"Which employees haven't taken leave this year?"</i>	HR report with recommendations
<i>"What's our cash position right now?"</i>	Real-time treasury snapshot

Nine Specialized AI Agents (Production Code: `018_ai_agents_module.sql`)

Each agent is deployed in the system with specific domain training:

```

| Code: backend/src/services/ai-agent.service.ts
|
| Schema: ai_agents, ai_conversations, ai_messages, ai_agent_actions
|
| API: /api/ai/agents/:agentCode/chat
|
  
```

Agent	Focus Area	Example Capabilities
Sales AI	Customer insights	Pipeline analysis, win/loss patterns, forecasting
Finance AI	Financial analysis	Variance explanations, cash flow projections, period comparisons
HR AI	People management	Policy questions, leave balances, compliance status
Procurement AI	Supplier management	Spend analysis, supplier performance, reorder suggestions
Inventory AI	Stock management	Stock queries, reorder recommendations, slow-moving items
Compliance AI	Regulatory guidance	Deadline reminders, compliance status, regulation explanations
Analytics AI	Reporting	Custom reports, trend analysis, anomaly detection
Treasury AI	Cash management	Cash position, FX exposure, liquidity forecasting
Logistics AI	Operations	Delivery tracking, route optimization, fleet status

Why This Matters

Benefit	Impact
Reduced Training Time	Users productive in hours, not weeks
Lower Support Costs	AI handles routine queries 24/7
Faster Data Access	Ask a question, get an answer — no report building
Democratized Insights	Everyone can access business intelligence, not just analysts
Continuous Learning	AI improves based on usage patterns

Differentiator 6: Business Actions = Accounting Done

The Problem:

In most organizations, business people do their work (approve PODs, process payroll, receive payments), then accountants must separately record it all in the accounting system. This creates:

- Double work (same transaction entered twice)
- Delays (financials lag behind operations)
- Errors (manual transcription mistakes)
- Reconciliation nightmares (finding why systems don't match)

Our Solution:

You do business. Accounting happens.

When a business person takes action in SiyaBusa, the accounting is done automatically. No separate accounting entry. No double work. No waiting.

SCENARIO 2: PAYROLL

HR runs payroll

Finance Director clicks "APPROVE"

PAYMENTS SCHEDULED

- Employee bank transfers
- SARS PAYE payment

ACCOUNTING DONE:

DR: Salaries & Wages

CR: Net Pay Liability

CR: PAYE Payable

CR: UIF Payable

CR: SDL Payable

SCENARIO 3: BANK STATEMENT IMPORT

Bank statement uploaded

System matches transactions

MATCHED: Customer payment

R45,000 from ABC Trading

ACCOUNTING DONE:

DR: Bank R45K

CR: Accounts Receivable R45K

Invoice INV-2026-001 now PAID

SCENARIO 4: SUPPLIER GOODS RECEIVED

Warehouse scans goods in → Stock count confirmed

ACCOUNTING DONE:

DR: Inventory R25K

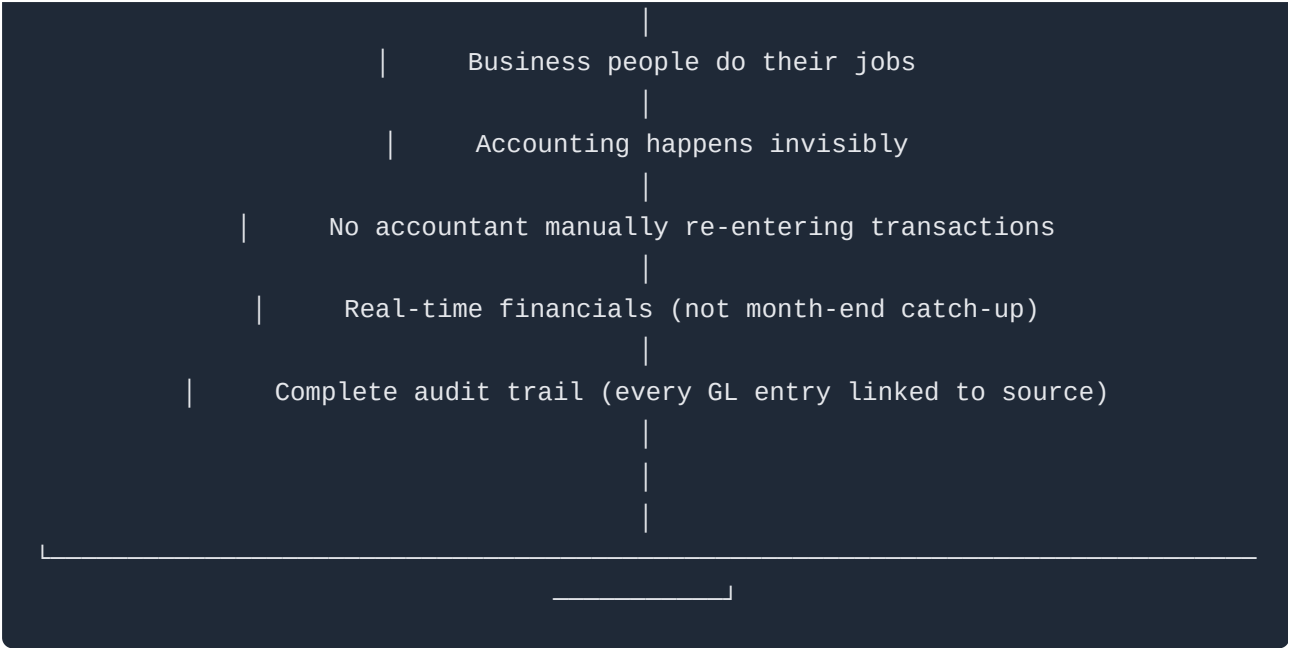

CR: GRNI (Accrual) R25K

When invoice arrives:

DR: GRNI R25K

CR: Accounts Payable R25K

THE RESULT:

The Philosophy:

"If you're doing data entry twice, you're doing it wrong."

In SiyaBusa, the business transaction IS the accounting entry. They are one and the same. The system understands the business context and creates the correct double-entry accounting automatically.

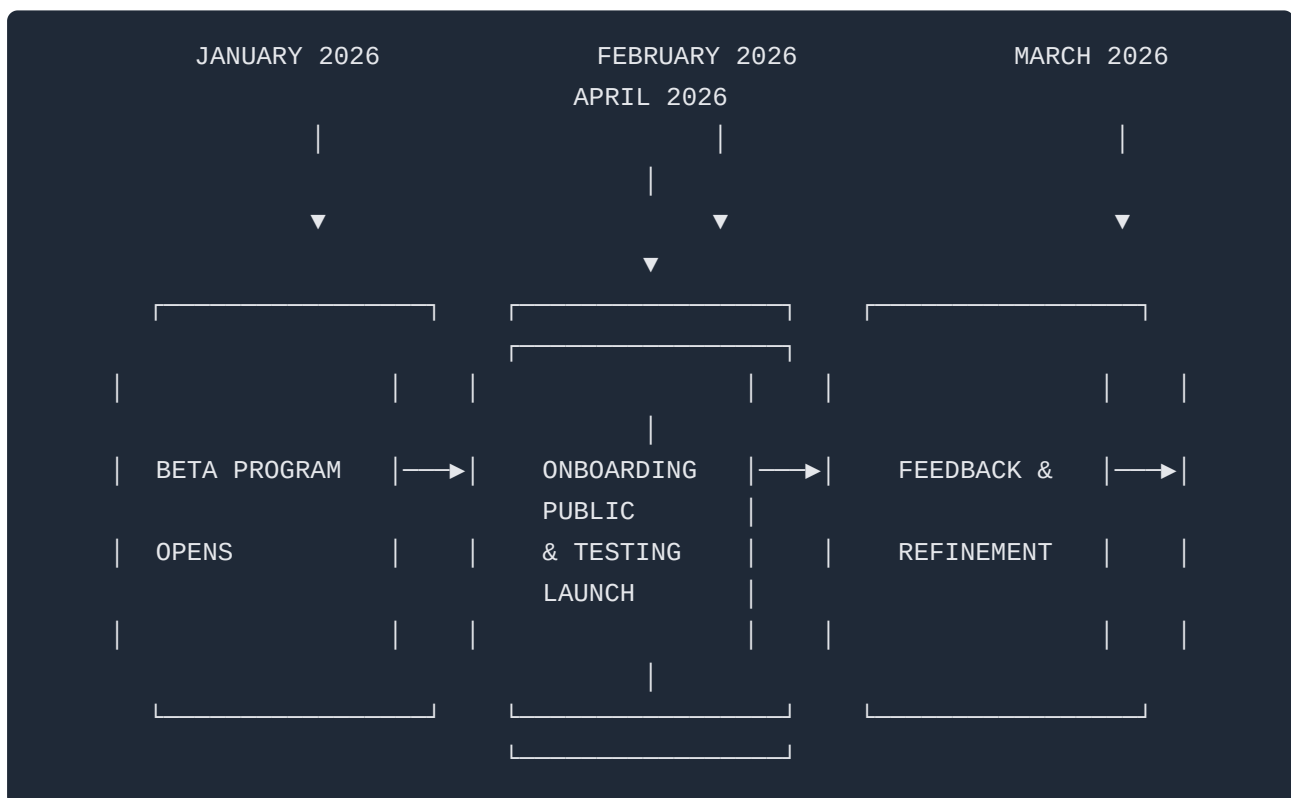

Why This Matters:

For Business Users	For Finance Teams
Just do your job — approve, confirm, complete	No more catching up at month-end
No accounting knowledge needed	Real-time visibility into operations
One action, not two	Every entry has a source document
Faster operations	Easier audit preparation

Traditional System	SiyaBusa
Operations team does work	Operations team does work
Operations team records in their system	→ Done. Accounting created.
Accountant reviews source documents	
Accountant enters in accounting system	
Accountant reconciles the two	
Discrepancies found and investigated	
Month-end completed (late)	

7. Go-To-Market Strategy

Launch Timeline

Phase 1: Beta Testing Program

Duration: January – March 2026

Objective: Real-world validation with businesses committed to testing and providing feedback

Beta Program Structure

Element	Detail
Start Date	January 2026
Trial Period Ends	March 2026
Access	Full system access at no cost during trial
Requirement	Active usage and regular feedback
Regions	Gauteng (Johannesburg, Pretoria), Western Cape (Cape Town)

Target Industries for Beta

We are seeking beta partners across **six key industries** that align with our specialized vertical modules:

Industry	Why This Industry	Vertical Module
Healthcare	Complex compliance requirements, patient data sensitivity, medical aid billing	Healthcare Operations
Mining	Heavy operational complexity, safety compliance, asset-intensive	Mining Operations
Professional Services	Time billing, project management, partner compensation	Practice Management
Manufacturing	Production planning, BOM management, shop floor control	Manufacturing Hub
Property Management	Lease management, tenant billing, portfolio management	Property Management
Construction	Project costing, progress billing, contractor management	Construction Management

Beta Partner Benefits

Benefit	Description
Free Access	Full system during 3-month trial
Direct Development Access	Feedback directly to engineering team
Priority Feature Requests	Your needs shape the roadmap
Founding Partner Pricing	Preferential rates post-launch
Case Study Opportunity	Featured in launch materials (if satisfied)

What We Need From Beta Partners

Requirement	Why It Matters
Active Usage	Real data reveals real issues
Regular Feedback	Structured input improves the product
Honest Assessment	We need to know what doesn't work
Testimonials	Social proof for launch (if experience is positive)

Phase 2: Feedback & Refinement

Duration: March 2026

Objective: Incorporate learnings before public launch

Week	Activity
Week 1	Structured feedback collection from all beta partners
Week 2	Prioritization of critical issues and enhancements
Week 3	Implementation of essential changes
Week 4	Final validation with beta users

Phase 3: Public Launch

Date: April 2026

Objective: Official market entry with market disruption

Launch Campaign Elements

Category	Activities
PR & Media	Press releases, business publication coverage (Business Day, Fin24, ITWeb, TechCentral)
Digital Marketing	LinkedIn campaigns (primary B2B channel), Google Ads, SEO optimization
Website	Refreshed website with case studies, pricing calculator, demo booking
Branding Materials	Pull-up banners, presentation decks, branded collateral, trade show materials
Launch Event	High-impact launch event in Johannesburg with media coverage
Equipment	Demo stations, presentation equipment for events and client visits
Sales Enablement	Demo environment, proposal templates, competitive battle cards

Initial Target Markets

Region	Focus
Gauteng	Johannesburg, Pretoria — largest business concentration
Western Cape	Cape Town — tech-forward market
KwaZulu-Natal	Durban — manufacturing and logistics hub

8. Investment Opportunity

Why SiyaBusa ERP?

The Market Opportunity

Factor	Detail
Underserved Segment	Mid-market businesses (R10M–R500M revenue) have no good ERP options
Total Addressable Market	60,000+ mid-market businesses in South Africa alone
Regional Expansion	SADC region represents additional significant TAM
Growth Trajectory	SA enterprise software market growing 18%+ annually

Why Now?

Trend	Implication
Cloud Adoption	Businesses ready for cloud ERP (40%+ YoY growth)
Compliance Pressure	SARS, POPIA, B-BBEE driving need for integrated solutions
Global ERP Fatigue	Frustration with expensive, slow implementations
Digital Transformation	Post-COVID acceleration of business digitization

What We Have Built

Asset	Value
Production-Ready Platform	25+ modules, 400+ endpoints, deployed on AWS
Native SA Compliance	SARS, BCEA, POPIA — not bolted on, built in
Modern Architecture	Cloud-native, API-first, multi-tenant
AI Capabilities	Natural language assistant with 9 specialized agents
Industry Verticals	6 specialized modules ready for market

Competitive Moat

Moat	Description
SA Compliance Depth	Years of development that global vendors would need to replicate
Pricing Position	40% below global vendors while maintaining margins
Implementation Speed	4–8 weeks vs. 6–12 months creates immediate value
Local Market Knowledge	Understanding of SA business practices, regulations, culture

Summary: The SiyaBusa Proposition

For Mid-Market South African Businesses

Value Proposition
Enterprise-grade ERP — Comparable to SAP, Oracle, Microsoft Dynamics
40% more affordable — Same pricing model, significantly lower rates
Native SA compliance — SARS, BCEA, POPIA built-in, not bolted on
Faster implementation — 4–8 weeks, not 6–12 months
AI-powered assistance — Natural language, contextual help, 24/7
Industry verticals — Healthcare, Mining, Manufacturing, Property, Construction, Professional Services
Pay for what you use — Module-based, per-user pricing
Local support — South African team, direct relationship

Key Milestones

Milestone	Date	Status
Core modules development	October 2025	Complete
Industry verticals	November 2025	Complete
AWS production deployment	November 2025	Complete
Documentation & training materials	December 2025	Complete
Beta Program Opens	January 2026	Upcoming
Beta feedback collection	March 2026	Planned
Public Launch	April 2026	Planned

Contact & Next Steps

For Beta Program Participation

We are actively seeking beta partners across our six target industries:

- Healthcare

- Mining
- Professional Services
- Manufacturing
- Property Management
- Construction

For Partnership Enquiries

- Accounting firm partnerships
- Implementation partner opportunities
- Reseller enquiries

For Investment Discussions

- Strategic investment opportunities
- Growth capital discussions

Appendix: Technical Validation

What Has Been Built (Verifiable)

Component	Evidence
25+ Modules	Complete backend controllers, database schemas, frontend interfaces
400+ API Endpoints	Documented REST API with Swagger/OpenAPI
228+ Database Tables	PostgreSQL schema with relationships, indexes, constraints
Multi-tenant Architecture	Tenant isolation implemented and tested
AWS Deployment	EC2, RDS, S3 infrastructure operational
AI Assistant	Functional natural language processing with domain knowledge

Compliance Features (Verifiable)

Feature	Status
PAYE Tax Tables	Current SARS rates implemented
UIF Calculations	2% (employer/employee split) automated
SDL Calculations	1% levy automated
BCEA Leave Types	Annual, sick, family responsibility, maternity
Audit Trail	Complete transaction logging
SARS Submission Prep	Generates submission-ready files
SARS API Integration	 Pending SARS approval

*This document represents the current state of SiyaBusa ERP as of December 2025.
All capabilities described are either complete or clearly marked with their current status.*

SiyaBusa ERP
We Rule. We Govern. We Empower.

Seamlessly Integrated Yielding Accountability for Businesses with Unified Systems & Automation

Document Version: 1.0
Date: December 22, 2025
